Comments:

Paul and Tom -

Here is the cultural survey information relating to the Plan of Operation (U-77778) in Section 7, T.6S., R. 7W. We do not provide the actual survey reports, but we reference them. Actually, I do not have a report in our files. I do have documents referencing the cultural inventory (U-98-BL-0456) completed and

covering the same area as the Plan. I hope this helps. Please let me know if you need additional information.

Cheryl M.

ENVIRONMENTAL CHECK LIST

for
Notices and/or Plans of Operation

The attached Notice/Plan of Operations was submitted under the Surface Management regulations for mining operations at 43 CFR 3809. The Notice/Plan was received on Sept. 19, 2001.

For Notices, we have 15 calendar days to review the document and to conduct any field examinations that may be necessary. If we need additional time to assure adequate environmental protection, we must notify the operator within the 15 day timeframe that additional time is required. For Plans of Operation, we have 30 days to complete the environmental review process, or to notify the operator that additional time is required. Please notify the Resource Area Geologist if more time is necessary to complete your review.

Please review the attached Notice/Plan and hand-carry to the next available specialist. This should generally be accomplished in one day. Please attach your comments on a separate sheet of paper.

This project ~~has~~ will have no effect on historic properties, as documented by inventory project 98-455. Laird May 10-1-01

Subject: Terra Diatomaceous Earth Mine

Mike;

A Class I literature review indicates that the area of potential effect (APE) for the Terra Diatomaceous Earth Mine has been surveyed twice and no sites have been identified. The first survey (U-87-BL-0350b) was completed by Shelly Smith in 1987 for the Green DLE and the second survey (U-98-BL-0455b) was completed by Doug Melton in 1998 for the Skull Valley Land Exchange. SHPO consultation was completed for both of these surveys.

The APE for the Terra Diatomaceous Earth Mine may be considered "cleared." If you have any questions or need further assistance, please contact me.

Cheers,
Lori Hunsaker
